

**BSR E1.43, Performer Flying Systems  
PR3 limited review explanation**

At the March 2024 Rigging Working Group meeting, a motion to approve BSR E1.43 as an American National Standard was made and seconded. The motion was sent to letter ballot, and carried with the required supermajority. However, two objections to the wording of section 6.1.6 were received. At the July 2024 Rigging Working Group meeting, the objections were deliberated, and the consensus voting body approved revisions to the wording of section 6.1.6. This resulted in a substantive change, thus requiring this public review. Since no other changes were made to the document, this public review is limited to the changes made in section 6.1.6. Comments on other sections will not be considered, but will be retained for consideration in future revisions of the standard.
